

EKUANTUM · RESTAURANTS · POWERED BY PLATOPILOT

YOUR RESTAURANT ANSWERS ALWAYS, TAKES ORDERS AND GETS PAID IN THE SAME PANEL

Kimi, the AI employee for restaurants, answers your calls and WhatsApp, takes orders and books tables; everything lands in your location's POS and your own ordering page, with no commission per order. PlatoPilot is EK1's restaurant module.

EKUANTUM

EK

THE REALITY

The line is busy at peak hour. And every order through a delivery app costs you a commission

Do you lose calls and bookings because nobody can pick up the phone mid-service?

Do WhatsApps get answered when there is time, and the customer has already chosen another restaurant?

Do delivery apps keep a cut of each order and the customer data is not yours?

Do orders, bookings and the till each live in a different place?

CALLS · WHATSAPP · ORDERS · BOOKINGS · POS

From the call to the payment without copying data

What a customer asks for by phone, WhatsApp or from your page goes to the same place: the order reaches the kitchen, the booking the floor and the payment the cash closing.

The AI does no maths — Prices, extras, discounts and totals are calculated by the system from your menu. Kimi talks; she never invents a price or a total.

EK

WHAT IT DOES FOR YOU

Your restaurant, in the panel

01 AI calls
Up to 20 calls at once, natural voice, even when closed. Keep your number: forward it from the one you have.

02 AI WhatsApp
Unlimited conversations: orders, bookings and questions on hours, address, allergens and menu, in the customer's language.

03 Complete orders
Delivery, pickup and table, with extras, free ingredient removal, delivery zone and minimum order checked.

04 Real bookings
Checks real availability and assigns a table. No double bookings.

05 Your ordering page
Menu with photos, allergens, extras and cart, with your logo and no commission per order.

06 Restaurant POS
Orders from the waiter's phone, kitchen screen, payment, receipt and cash closing. Free to start.

07 Live panel
Orders with status, bookings, revenue, average ticket and best sellers.

08 No-show control
Confirms the booking 2 hours before with Yes/No buttons and alerts the manager if there is no reply. The table is never released automatically.

09 Automations you switch on
Order-ready notice, morning briefing, reviews after the meal, slow-day offer and supplier order. Off by default.

EK

WHAT YOU GET

A place that answers, cooks and gets paid without loose papers

Every order and booking with its history, in the same panel as the rest of your business.

📞 Orders and bookings handled

By call and WhatsApp, at any hour.

🧾 Orders to the kitchen

Kitchen screen coloured by wait time.

🌐 Your ordering page

With your menu and brand, no middlemen.

📊 Reports and stock

By dish, hour, waiter and margin, with recipe costing.

EK

HOW IT WORKS

From signing up to serving, same day

1. You sign up online and your restaurant, panel and ordering page are created automatically.
2. You upload your menu: dishes, photos, prices, extras, tables, delivery zones and hours.
3. You connect your WhatsApp and forward your phone to Kimi.
4. Orders and bookings land in your panel and your POS.

Your restaurant answers 24 hours, with no commission per order.

EK

THE DIFFERENCE

Not a chatbot. It is an employee who takes orders and fills tables

› Customers and data are yours

Orders from your page and your WhatsApp go into your panel, no platform in between.

› No commission per order

You pay the plan fee; every order is yours. If you take cards, the payment processor charges its usual rate.

› AI with the numbers in the system

Totals, extras and bookings are calculated and checked by the system, not the model.

EK

WHAT YOU GET

Fewer missed calls, more full tables

20
calls at once

24/7
answering, even when closed

0%
commission per order

EKPlatoPilot, EK1's restaurant module

- ✓ Free restaurant POS: orders on the phone (up to 3 waiters), floor, one kitchen destination, payment, receipt, cash closing and a QR menu to browse, 1 location.
- ✓ Premium POS (€29/mo per location): unlimited waiters, several kitchen destinations, prices by zone and time, full invoice with tax ID, cash counts, reports by dish, hour, waiter and margin, stock and recipe costing, customer records and loyalty, QR that orders and pays, multiple locations and time clock.
- ✓ Kimi, the restaurant's AI employee: orders, information and table booking on WhatsApp (€50/mo + €500 set-up) or on WhatsApp and voice (€100/mo + €1,000 set-up).
- ✓ Your ordering page with menu, photos, extras, cart, delivery zones and minimum order.
- ✓ No-show control: confirmation at 2 h with Yes/No buttons, manager alert at 45 min, waiting list with 15 min to accept the table; inside Kimi, no new price.
- ✓ Automations that ship off and you switch on in “My place”: “Your order is ready”, morning briefing to the owner, reviews after the meal (with the Reviews module, included in EK1 CRM and Suite, which also keeps all your reviews together, your own and the ones you paste from Google, TripAdvisor or Instagram, with the problems that repeat and a draft reply you publish yourself) and, in Premium POS, a slow-day offer (you approve it) and a supplier draft order (you send it).

It does not include shift rosters or integration with Glovo, Uber Eats or Just Eat. The receipt carries a record, hash and QR in non-verifiable mode: submission to the tax agency will come later. WhatsApp notices need the official WhatsApp line (messages are paid to Meta) and call
